

CAREER OBJECTIVE

A highly motivated and results-driven Software Engineer with a passion for solving complex problems and delivering high-quality solutions. I aim to join a dynamic team where I can further develop my skills, take on new challenges, and make a meaningful impact on organizational growth and success.

TECHNICAL SKILLS

BackEnd Development : Node.js, Express.js, GraphQL, REST APIs, OAuth 2.0, Server-side scripting.
FrontEnd Development : React, HTML, CSS, AWS S3, CICD , Tailwind-CSS
Database : MongoDB , PostgreSQL , Redis, MySQL, Data Modeling, Query Optimization.
Tools : Git, GitHub, Visual Studio Code, Jira, Postman, Unit Testing (Jest), Docker.

WORK EXPERIENCE

Software Engineer, AGMAH

Sep 2023 – Present

- Developed and optimized backend services using **Node.js** and **Express**, managing data with both **MongoDB** (NoSQL) and **PostgreSQL** (SQL) databases.
- Experience with **functional components and React Hooks**.
- Experience integrating **React frontend with Node.js/Express APIs**.
- Worked on frontend features using **React.js**, building reusable components and integrating REST APIs
- Collaborated on **full-stack (MERN) development**, connecting UI with backend services.
- Implemented a robust **OAuth 2.0** authentication server to enhance login security, ensuring secure access and better user management.
- Designed and executed comprehensive **unit** and **integration test** cases using tools like **Jest**, enhancing code reliability and maintainability..
- Worked extensively with **GraphQL** and **REST API's**, optimizing data retrieval and ensuring efficient client-server communication.
- Managed containerization and orchestrated deployments with **Docker** and **Kubernetes**, ensuring scalable, efficient, and resilient applications.
- Implemented **rate limiting** and **throttling** mechanisms to prevent abuse.
- Designed database schema and data models for high-performance applications.
- Integrated **CSRF token protection** to prevent cross-site request forgery attacks.
- Reduced API response time by **40%** using **Redis** and by using optimized database query.
- **Microservices** Architecture (Conceptual understanding of service design, REST-based communication, and API Gateway patterns).
- Implemented parallel processing using **Worker Threads to handle CPU-intensive tasks** without blocking the **event loop**.

Software Developer Trainee, Function Up

Jan 2023 – Aug 2023

- Integrated WebSockets with **Redis Pub/Sub** for distributed real-time messaging across services.
- Utilized **AWS S3** for cloud-based storage solutions, improving data accessibility and security.
- Implemented **real-time communication using WebSockets** for instant data updates.

PROJECTS

Smart-Supervisor

- Scaled multitenant system using dynamic MongoDB models per project, enabling efficient data isolation across clients
- Database Management: Utilized MongoDB for efficient data storage and retrieval, allowing for easy management of e-books and user information.
- Built a realtime IoT communication layer using Zenoh pub/sub for bidirectional device interaction.

Product-Management

- This project is based on the E-commerce website and Cart Management.
- Implemented aws-s3 for uploading user and product image to S3 bucket.
- Implemented cache with Redis and used Authentication and Authorization for security.

Education

SAVITIBAI PHULE PUNE UNIVERSITY

- Bachelor of science (2019-2022) CGPA: 8.4
